

IDIS REFLEX®
ECS ALARM
SYSTEM

YAPI MERKEZI IDIS ECS ALARM SYSTEM

Build to monitor and control the situations in technical buildings along the railway line and highways.

ALARM CONTROL UNIT

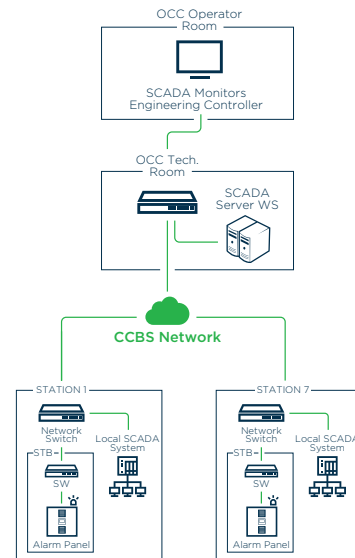

Main functions of the Alarm Control Unit systems are; detection, evaluation and monitoring of critical situations such as fire, unauthorized access, temperature increase in technical buildings; related alarm notifications.

Alarm Control Unit (ACU)

SCADA System

SCADA System is integrated into the Alarm Control Unit for monitoring and control. Generated alarm notifications warn the operator through the SCADA System and the operator can check and confirm the information about the related alarms.

SCADA & Alarm System Architecture

Alarm Control Unit Features

- Ergonomic structure
- Easy to install
- Optimum use of space
- Maximum flexibility
- PLC based system
- Network connection support
- Practical user interface
- Local warning / Announcement option

Alarm Control Unit Functions

- Fire detection
- Intrusion / Theft detection
- Temperature monitoring
- Monitoring power system boards
- UPS / Generator monitoring
- Mechanical systems monitoring
- Key / Card entry system

Alarm Control Unit Configurations

- Wide range of communication protocols
 - MODBUS TCP/IP
 - Standard TCP/IP
 - SNMP
 - IEC 870-5-104
 - RS232 - RS485
- Flexible protection class - Outdoor option
- HMI option
- Sizing according to the controlled area

SCADA Features

- Various visual (map, list, settlement) graphical interface
- Multiple visual interfaces at the same time
- User authorization
- Alarm prioritization / classification
- Recording and archiving

SCADA Functions

- Fire alarms
- Intrusion alarms
- Power system / UPS alarms
- Camera recording and monitoring
- Filtering / reporting past alarms
- Printing

SCADA Configurations

- Distributed system solutions
- Master - Slave operation
- Wide range of communication protocols
- Remote access
- Control options (lighting,ventilation)
